

SUJATA S. PUROHIT, MD

I became a doctor because

"Growing up in Michigan allowed me to pursue a lifelong love of education. My father, who spent his career in the automotive industry, instilled in me an interest in technological advances. In addition, my personal experiences of family members and friends suffering from illness made me want to pursue a career in medicine. As I progressed through medical school at the University of Michigan, it was clear to me that Ophthalmology would unite my love for medicine, surgery, and technology. After completing my residency in Ophthalmology, I obtained additional subspecialty training in cornea and refractive surgery at the University of California in San Diego. Throughout my specialized training, I witnessed how critical maintaining good vision is to all aspects of daily life. I also realized that vision cannot be taken for granted. With this background, my goal is to deliver the most advanced, compassionate, and ethical care to my patients."

Education:

Bachelor of Science with High Distinction
Cell and Molecular Biology
University of Michigan

Medical School:

University of Michigan

Residency:

University of Texas at Galveston

Fellowship:

University of California, San Diego
Shiley Eye Center
Cornea and Refractive Surgery

Member:

American Academy of Ophthalmology

My vision is making a difference to those around me

"My vision is to help my patients achieve their best possible vision. After training at some of the premier Ophthalmology institutions in the country, I returned home to Michigan where I was born and raised to accomplish this goal. I hope to bring my patients the wealth of advances that are changing the face of eye care today. I strongly believe that all patients must have access to all the latest advances in Ophthalmology. As a fellowship trained cornea and refractive surgeon, I am able to offer cutting edge treatments that are a part of this dynamic field. My practice philosophy is simply to deliver the best care to my patients. I believe it is very important to spend time explaining all treatment options to the patient. In this manner, my patients become an active part of the decision making process. With this approach, I am able to provide world class vision care here at TLC."
